

THE FIRST AND ONLY **MUSCLE SPASTICITY CONVENIENCE KIT**

WishBone Convenience Kits: Sterile Packed, Ready to Go

Your team aims to provide optimal treatment and care to every patient who needs it—when they need it. This is made possible when surgeons and supporting staff are equipped to work efficiently.

WishBone's Muscle Spasticity Convenience Kits contain the basic items needed for surgery. Eliminating the 'scavenger hunt' for various components, these sterile packed convenience kits enable teams to devote time where it matters most.

MUSCLE SPASTICITY

Spasticity is a condition in which muscles stiffen or tighten, preventing normal fluid movement. The muscles remain contracted and resist being stretched, thus affecting movement, speech and gait.

BOTOX® is the first medicine in its class FDA-approved to treat Pediatric Upper Limb Spasticity in children 2 to 17 years of age.*

BOTOX® may cause serious side effects that can be life threatening. Get medical help right away if you have any of these problems* any time (hours to weeks) after injection of BOTOX®:

- Problems swallowing, speaking, or breathing, due to weakening of associated muscles, can be severe and result in loss of life. You are at the highest risk if these problems are pre-existing before injection. Swallowing problems may last several months.
- Spread of toxin effects. The effect of botulinum toxin may affect areas away from the injection site and cause serious symptoms including: loss of strength and all-over muscle weakness, double vision, blurred vision and drooping eyelids, hoarseness or change or loss of voice, trouble saying words clearly, loss of bladder control, trouble breathing, and trouble swallowing.

*BOTOX® not included in kit. Indications and additional warnings as stated on manufacturer website: www.botoxspasticity.com
 BOTOX® and its design are registered trademarks of Allergan, Inc., an AbbVie company.
